

MUHAMMAD AWAIS HUSSAIN

AI Engineer — Machine Learning — Generative AI

Phone: +92-308-8497811 Email: awaishussain4444@gmail.com

GitHub: github.com/M-Awais-Hussain LinkedIn: linkedin.com/in/awais4 Portfolio: awais-hussain.vercel.app

Summary

AI Engineer and Software Engineering undergraduate specializing in Generative AI, Large Language Models, and intelligent automation systems. Experienced in building production-ready AI pipelines, Retrieval-Augmented Generation (RAG) architectures, and deploying machine learning models through scalable APIs. Skilled in model evaluation, fine-tuning LLMs, and advanced prompt engineering to improve system performance, reduce latency, and enhance user experience.

Technical Skills

AI Domains: Generative AI, Agentic AI, Machine Learning, Deep Learning, Retrieval-Augmented Generation (RAG), Fine-Tuning, Model Evaluation, Prompt Engineering, Natural Language Processing, Computer Vision

Programming: Python, SQL, Java, C, C++

AI/ML Frameworks: LangChain, LangGraph, LlamaIndex, CrewAI, TensorFlow, PyTorch, Keras, Transformers, Scikit-learn

Data & ML Tools: Pandas, NumPy, Matplotlib, Seaborn, OpenCV, YOLO, Mediapipe

Backend & Deployment: FastAPI, Flask, Streamlit, Chainlit, REST APIs, Model Deployment

Data Engineering: Data Pipeline Automation, Feature Engineering, Dataset Processing

Tools: Docker, Git, GitHub, N8N, LangFlow, Power BI, Oracle SQL, Excel

Soft Skills: Communication, Collaboration, Problem Solving, Cross-functional Development

Experience

AI Engineer Intern

Jul 2025 – Aug 2025

DevRolin

On-site

- Built and deployed AI chatbots and automation workflows using LangChain and LangGraph, improving operational efficiency by 20% across internal processes.
- Developed scalable AI pipelines and automated data workflows for real-time information processing.
- Improved model reliability and reduced inference errors by 15% through systematic model evaluation, testing, and debugging.

Machine Learning Intern

Sep 2025 – Nov 2025

HireBridge

Remote

- Developed machine learning and deep learning models achieving 92% prediction accuracy on structured datasets containing thousands of samples.
- Built end-to-end ML pipelines including preprocessing, feature engineering, model training, evaluation, and model deployment through REST APIs.
- Collaborated with distributed engineering teams to integrate ML APIs into production applications, reducing deployment time by 25%.

Education

B.Sc. Software Engineering (Expected Jun 2026)

Sep 2022 – Jun 2026

University of Engineering and Technology, Taxila

CGPA: 3.79 / 4.00

Certifications

- Introduction to Generative AI – Google Cloud (LLM fundamentals, prompt engineering) — May 2025
- Introduction to Large Language Models – Google Cloud (Transformer architecture, LLM concepts) — May 2025

Projects

Persistent AI Chatbot — Python, FastAPI, LangChain, LangGraph

Mar 2025 – May 2025

- Developed a production-style AI chatbot with integrated tools including web search and calculator using LangGraph workflows.
- Implemented short-term and long-term memory, streaming responses, and human-in-the-loop control to improve conversational accuracy and usability.
- Applied advanced prompt engineering techniques to enhance response relevance and reduce hallucination in LLM outputs.

YouTube Chatbot Chrome Extension — JavaScript

Jun 2025 – Jul 2025

- Built a Chrome extension enabling conversational interaction with YouTube video content through an integrated chatbot interface.
- Implemented contextual content retrieval and real-time response generation to improve information accessibility for users.
